

Julian Dash: 15+ Years Renewable Energy Experience

Dash founded Copacity in 2012 and has advised and assisted its clients in the procurement, financing, negotiation, completion and management of over 100 mW of distributed renewable energy projects. Against this backdrop, Copacity is now developing a new end-to-end online renewable energy procurement solution, which will provide efficiencies and greater savings via a completely client-controlled, client-customized platform.

Prior to Copacity, Dash served as Rhode Island's Renewable Energy Fund Director, where he oversaw the state's clean energy financing, programs and initiatives.

Dash transformed the then small residential solar grant program into a comprehensive clean energy economic development program, and made targeted investments that supported the nation's first offshore wind project, convened over 120 stakeholders to produce the state's green economy strategic roadmap and led to implementation of new policies and programs that has increased Rhode Island's renewable energy installed capacity potential by over 1,000mW.

Before the REF, Dash oversaw the finance and development of a variety of green, mixed-use and mixed-income projects, including the award-winning "Plant" project, along with numerous clean energy initiatives within large-scale public and affordable housing projects in Washington, DC and Baltimore, MD.

Dash earned his undergraduate degree in International Finance at Morgan State University and his MBA from Babson College. A native of South Providence, RI, Dash currently divides his time between both Providence and New York City, while being an active member of his communities, serving on numerous professional boards.
